

The logo for MPERIA, featuring the word in a bold, sans-serif font. The 'M' is stylized with a green and yellow gradient, while the rest of the letters are white. A registered trademark symbol (®) is at the end.

MPERIA®

Packaging Line Control Made Easy

Introducing the only universal marking and coding automation platform that works with virtually any hardware or software.

**Matthews
Marking Systems™**

► Centralize packaging control— regardless of equipment technology or vendor.

Simplify your setup. Scale your operations when ready.

Consolidated control over all marking and coding across primary, secondary and tertiary packaging lines just got easier. MPERIA seamlessly integrates with virtually any coding equipment, data file or enterprise system. It's so adaptable, you'll never need to re-engineer existing data systems or modify current workflows.

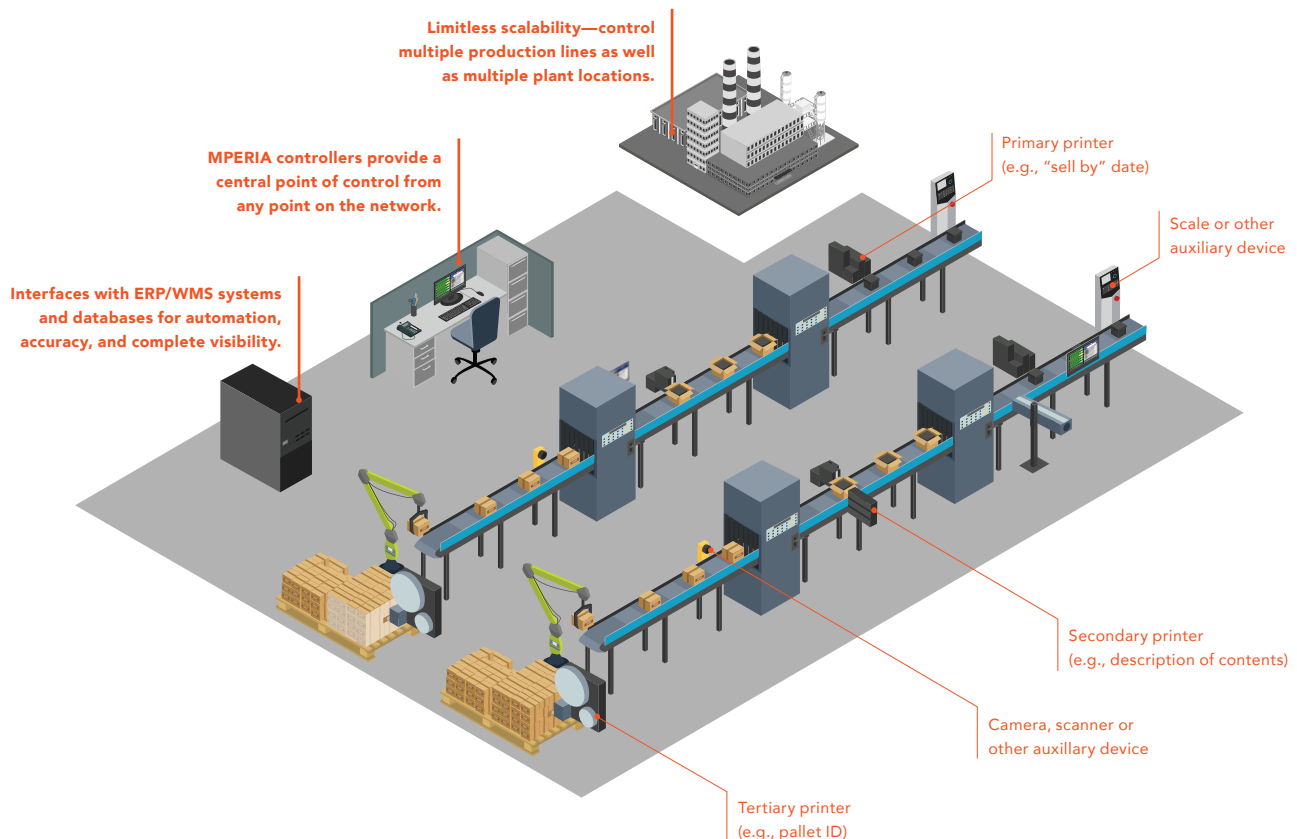

Flexible architecture and our library of standard plugin drivers—along with the use of common communication protocols—keeps integration costs down and makes equipment upgrades easy. Unparalleled system performance allows limitless extensibility to multiple lines and plants to keep up with your growth.

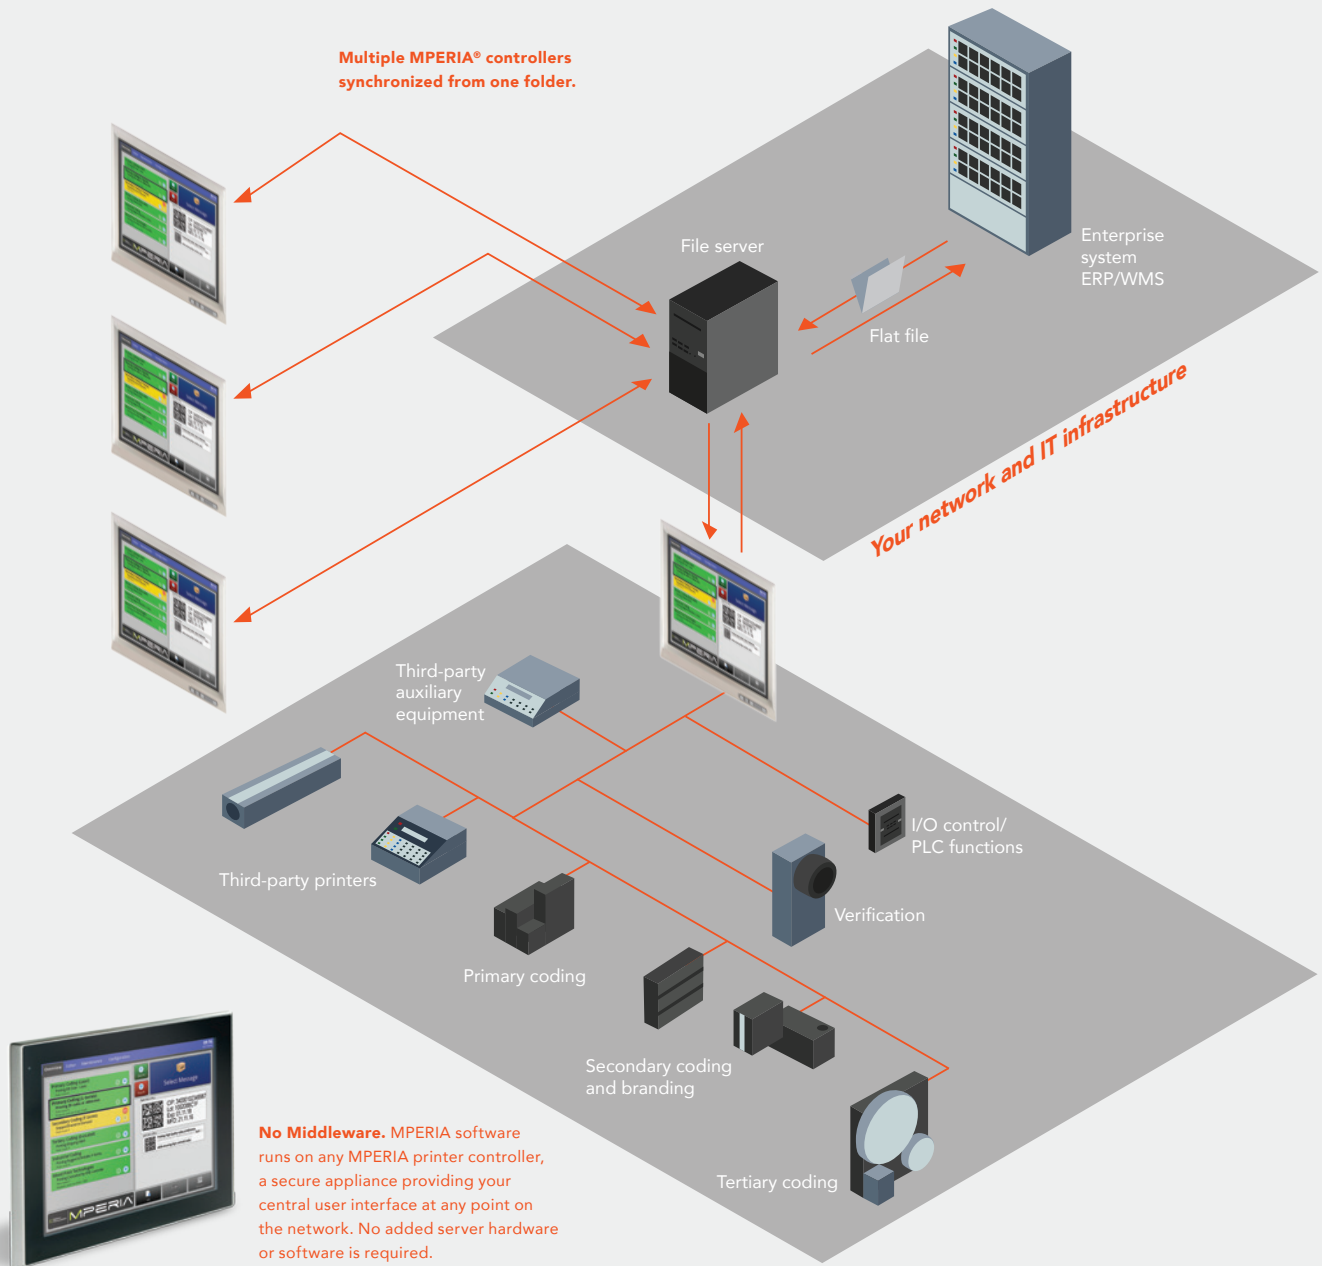

Mastermind your production lines.

Increase efficiency—across the production floor or around the world. MPERIA enables you to manage and control marking at every stage of your packaging—primary, secondary and tertiary—all from a single location. Control one printhead, one production line—or many. Meanwhile, line operators need only be trained on a single system to start jobs, manage changeovers, and resolve issues faster.

Cut down your downtime. Reduce user error and recalls.

Automate code and message changeovers—and keep accuracy and compliance at its best. MPERIA synchronizes with any ERP/WMS system or database to automatically send data to the production floor, from unique codes to serialization and batching. Integrate your vision systems to report back to the central system, verifying that codes, text and graphics are accurate and readable at every point—from product to pallet.

► Integrate now. Be ready for what's next. Here's how.

Enterprise system integration. MPERIA netFolder—a shared folder—synchronizes variable data between MPERIA and your existing enterprise systems. This means you can update messaging to all printheads on your packaging line, with no need for specialized server software or hardware. Methods for custom integration are also supported.

Equipment integration. MPERIA manages multiple devices and print technologies, including Matthews Marking Systems' high-performance printheads, as well as those from other manufacturers. In addition, manage barcode readers, vision systems, scales and actuators all through MPERIA's single, one-touch interface. Choose from our library of existing plugins or easily create your own.

Stop waiting. Start updating. Modernizing your packaging line is usually no small feat—until now. Only MPERIA® fits in anywhere to truly adapt to your environment. No IT headaches. No custom development. Centralizing and automating your marking and coding could hardly be easier.

Matthews Marking Systems is a global supplier of printing systems and consumables for product identification, branding, operational marking, and regulatory compliance.

With more than 160 years of marking and coding experience, we've established a global reputation as a premier innovator and manufacturer in the marking and coding industry.
