Cable marking using wrap-around labels

WICON

DE KONINGH CODING · LABELING · INSPECTION

WICON wrap-around applicator

Cylindric items of diameters 2 mm to 16 mm, such as single wires, strands, cables, hoses, tubes or round rods, can be labeled with the wrap-around applicator.

Transparent laminate covers data blocks and protects them persistently from dust and wear.

Items are inserted in horizontal orientation and centered by panels. Printing a label and wrapping it around an item takes 1.8 to six seconds, depending on the number of wrap-arounds.

Operation starts as soon as an item has been inserted. It may be triggered also by a foot switch, a data interface or an I/O interface. A label is printed and then picked up by the applicator. The diameter of an item is identified on the wrapper head. The size of a label determines how many times it will be wrapped around the item.

A finger guard covering the feed opening prevents items from being inserted or removed while wrap-arounds are in process.

Operations require materials been guided centered on a printer, as well as a slim print roller.

Only wrap-around labels provided by cab guarantee reliable applications. Make sure item surfaces are clean and free of lubricants.

cab recommends specific materials, in particular small diameters of 2 mm to 3 mm, be tested at the factory.

Pivoting the applicator allows label rolls or ribbons been replaced easily.

A service door enables access to the wrapper head in cases of errors, such as label jams.

Technical data

Wrap	-arour	nd applicator		WICON	
Item	Dia	meter	mm	2.0 - 16.0	
	Len	gth	132		
	Cen	tering panel distant to left a	nd right mm	124	
	Lab	el margin distant to centerir	ng panel mm	12.7	
	Lab	el margin distant to edge of iten	n by stop mm	25 - 100	
	Def	lection related to a length of	124 mm mm	max. 1	
Label	Wid	th	12.7 - 50.8		
	Hei	ght	19.1 - 70.0		
Applic	ator	Cycle time printing and ap or applying and	, , ,	1.8 - 6	
		Number of wrap-arounds		2 - 10	
		Speed of wrapping	u/sec	3.0	
		Initial percentage of speed of wrapping	%	10 to 100	
		Wrapper position	mm	-2	
Start	auton	natically, as soon as an item	has been inse	rted by hand	
	or via	data interface			
	or via	I/0 interface			

Label margins are at least 12.7 mm distant to the outside of the centering panel. Moving the applicator aligns the outside of a liner material to the marking.

Label print	SQUIX 4/MP					
Materials gu	ided on the printer		centered			
Print metho	d		Thermal transfe			
Print resolut	tion	dpi	300	600

All-around labeling

Up to the **D1** diameter value, a data block captures the circumference of an item.

Partial labeling

Up to the **D2** diameter value, protective laminate captures a data block.

WL V2 wrap-around labels

Labels can be removed from the peel-off plate of a printer by hand or transfered by the wrap-around applicator directly to items.

With labels 19.1 mm to 63.5 m mm high (H), item diameters 2 mm to 16 mm can be labeled. If using labels 70 mm high, the item diameter must be 6 mm or more.

The material properties of the wrap-around labels precisely match with automated labeling with WICON, so does the method of manufacture. cab does not provide any functional guarantee with third-party labels. Make sure item surfaces are clean and free of lubricants.

cab recommends specific materials, in particular small diameters of 2 mm to 3 mm, be tested at the factory.
